

Staying secure online doesn't have to be scary!

Protect your identity and accounts with these four simple habits:

Use strong, unique passwords

Avoid reusing passwords across accounts. The longer and more complex, the harder they are to guess.

Turn on multi-factor authentication (MFA)

An extra layer of security, even if your password is stolen.

Keep your devices updated

Regularly make sure your devices are running the latest software.

## Think before you click

Pause before opening suspicious links or attachments, and report any potential scams.

glance. Pausing to recognize red flags is the first step in protecting yourself from these harmful tricks.
